

COMSATS University Islamabad, Abbottabad Campus

Department of Computer Science

Human Computer Interaction (CSC356)

Assignment 3 (CLO 3)

BSE 7A

Scenario: A software company has been hired by **COMSATS University Islamabad** to redesign the existing **Student Portal**. The current system allows students to register courses, view attendance, access grades, pay semester fees, book appointments with faculty advisors, and receive university announcements.

Although the portal provides all essential services, students frequently complain that it is difficult to use. Common issues include confusing navigation, inconsistent layouts, poor color combinations, unclear error messages, lengthy course registration, and a user interface that does not work well on mobile devices. Faculty members also report that updating attendance and grades requires too many unnecessary steps.

The university wants the new portal to be intuitive, visually appealing, consistent across devices, and easy to learn for first-time users. The development team will follow an **Agile UX** approach, where design and development occur in short iterations with regular user testing and feedback.

Question 1: Design the Student Dashboard for the new portal.

[5 Marks]

Your design should include the following features:

- Dashboard/Home page
- Course Registration
- Attendance
- Grades

After designing the interface, explain how your design applies:

- GUI Principles
- Visual Hierarchy
- Consistency
- Alignment
- Contrast
- Typography
- Color Selection
- Feedback and Error Prevention

Question 2: Select the task "Course Registration" and perform the following analyses:
[5 Marks]

- Develop a **Hierarchical Task Analysis (HTA)** showing the main goal, sub-goals, and operations.
- Perform a **GOMS Analysis** by identifying:
 - Goal
 - Operators
 - Methods
 - Selection Rules
- Explain how the HTA and GOMS analyses can help improve the usability and efficiency of the course registration process.

Question 3: Assume the project will be completed in three Agile sprints.
[5 Marks]

Prepare an Agile UX plan that includes:

- Objectives of each sprint
- Design activities performed in each sprint
- User evaluation or testing conducted

Illustrate your answer using a sprint timeline or table.

END
