

COMSATS UNIVERSITY ISLAMABAD ABBOTTABAD CAMPUS

Name: Yawar Hussain

Registration no: SP23-BSE-122

Section: BSE 7A

Lab Task

Lab Task 1:

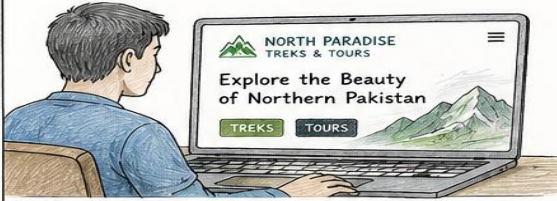

Storyboard Development Draw a storyboard depicting your project concept. Requirements:

- Include 6–8 panels showing the complete user journey.
- Clearly identify:
 - User goals
 - User actions
 - System responses
 - Final outcome

Panel	User Goal	User Action	System Response
1. Visit Website	<i>Find a travel company for a northern Pakistan tour</i>	<i>User opens the North Paradise website</i>	<i>Homepage displays featured tours and destinations</i>
2. Browse Tours	Explore available trips	User scrolls through trekking, safari, and expedition packages	System shows tour categories and package details
3. Select Package	Learn about a specific tour	User clicks on "K2 Base Camp Trek" or another package	System opens detailed itinerary, pricing, and inclusions
4. Review Details	Check tour information	User reads duration, itinerary, services, and requirements	System displays complete tour information
5. Contact Company	Ask questions or confirm availability	User clicks WhatsApp, phone number, or contact form	System provides communication options
6. Submit Booking Request	Reserve a tour package	User enters personal details and booking information	System receives and processes the request
7. Receive Confirmation	Verify booking submission	User submits the form	System shows confirmation message or contact acknowledgment
8. Prepare for Tour	Get ready for travel	User reviews confirmation and itinerary	Tour booking process is completed successfully

STORYBOARD: NORTH PARADISE TREKS & TOURS

1. Visit Website (Homepage)

User Goal: Find a travel company for a northern Pakistan tour
User Action: User opens the website
System Response: Homepage displays featured tours and destinations

2. Browse Tours

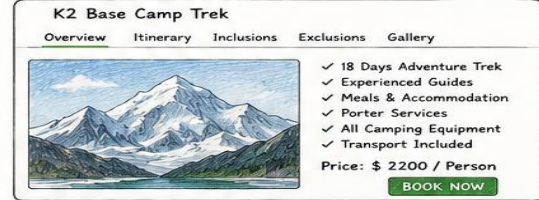

User Goal: Explore available trips
User Action: User scrolls through trekking, safari, and expedition packages
System Response: System shows tour categories and package details

3. Select Package

User Goal: Learn about a specific tour
User Action: User clicks on "K2 Base Camp Trek" or another package
System Response: System opens detailed itinerary, pricing, and inclusions

4. Review Details

User Goal: Check tour information
User Action: User reads duration, itinerary, services, and requirements
System Response: System displays complete tour information

5. Contact Company

User Goal: Ask questions or confirm availability
User Action: User clicks WhatsApp, phone number, or contact form
System Response: System provides communication options

6. Submit Booking Request

User Goal: Reserve a tour package
User Action: User enters personal details and booking information
System Response: System receives and processes the request

7. Receive Confirmation

User Goal: Verify booking submission
User Action: User submits the form
System Response: System shows confirmation message or contact acknowledgment

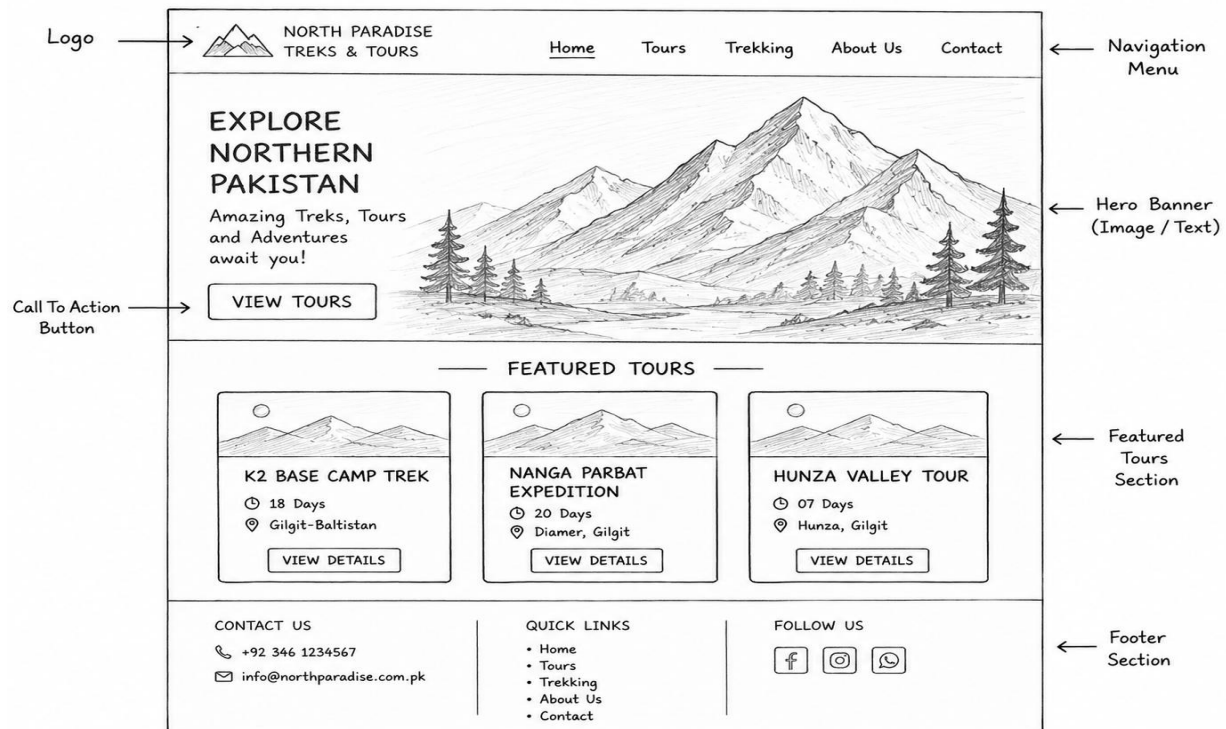

8. Prepare for Tour

User Goal: Get ready for travel
User Action: User reviews confirmation and itinerary
System Response: Tour booking process is completed successfully

Lab Task 02:

Screen 1: Home Page

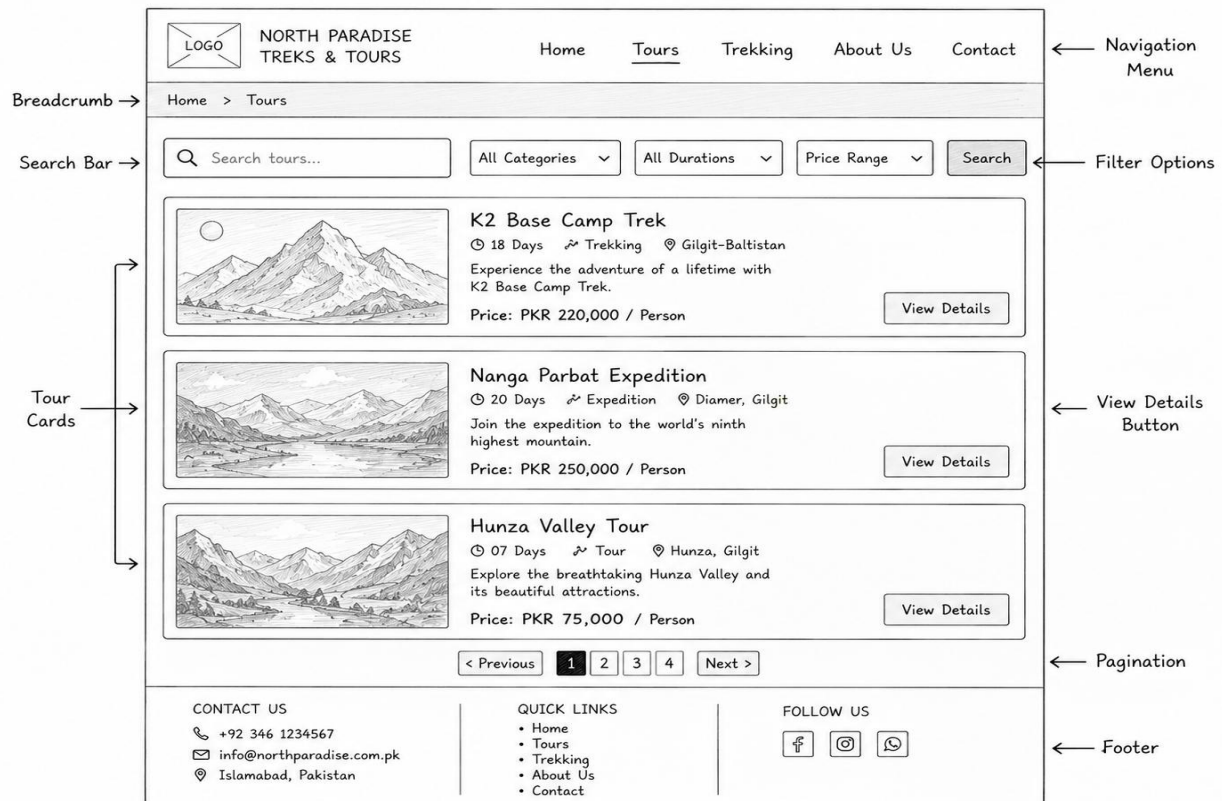

Components

- Logo
- Navigation Menu
- Hero Banner
- View Tours Button
- Featured Tours Section

Navigation:

Home → Tours Page

Screen 2: Tours Listing Page

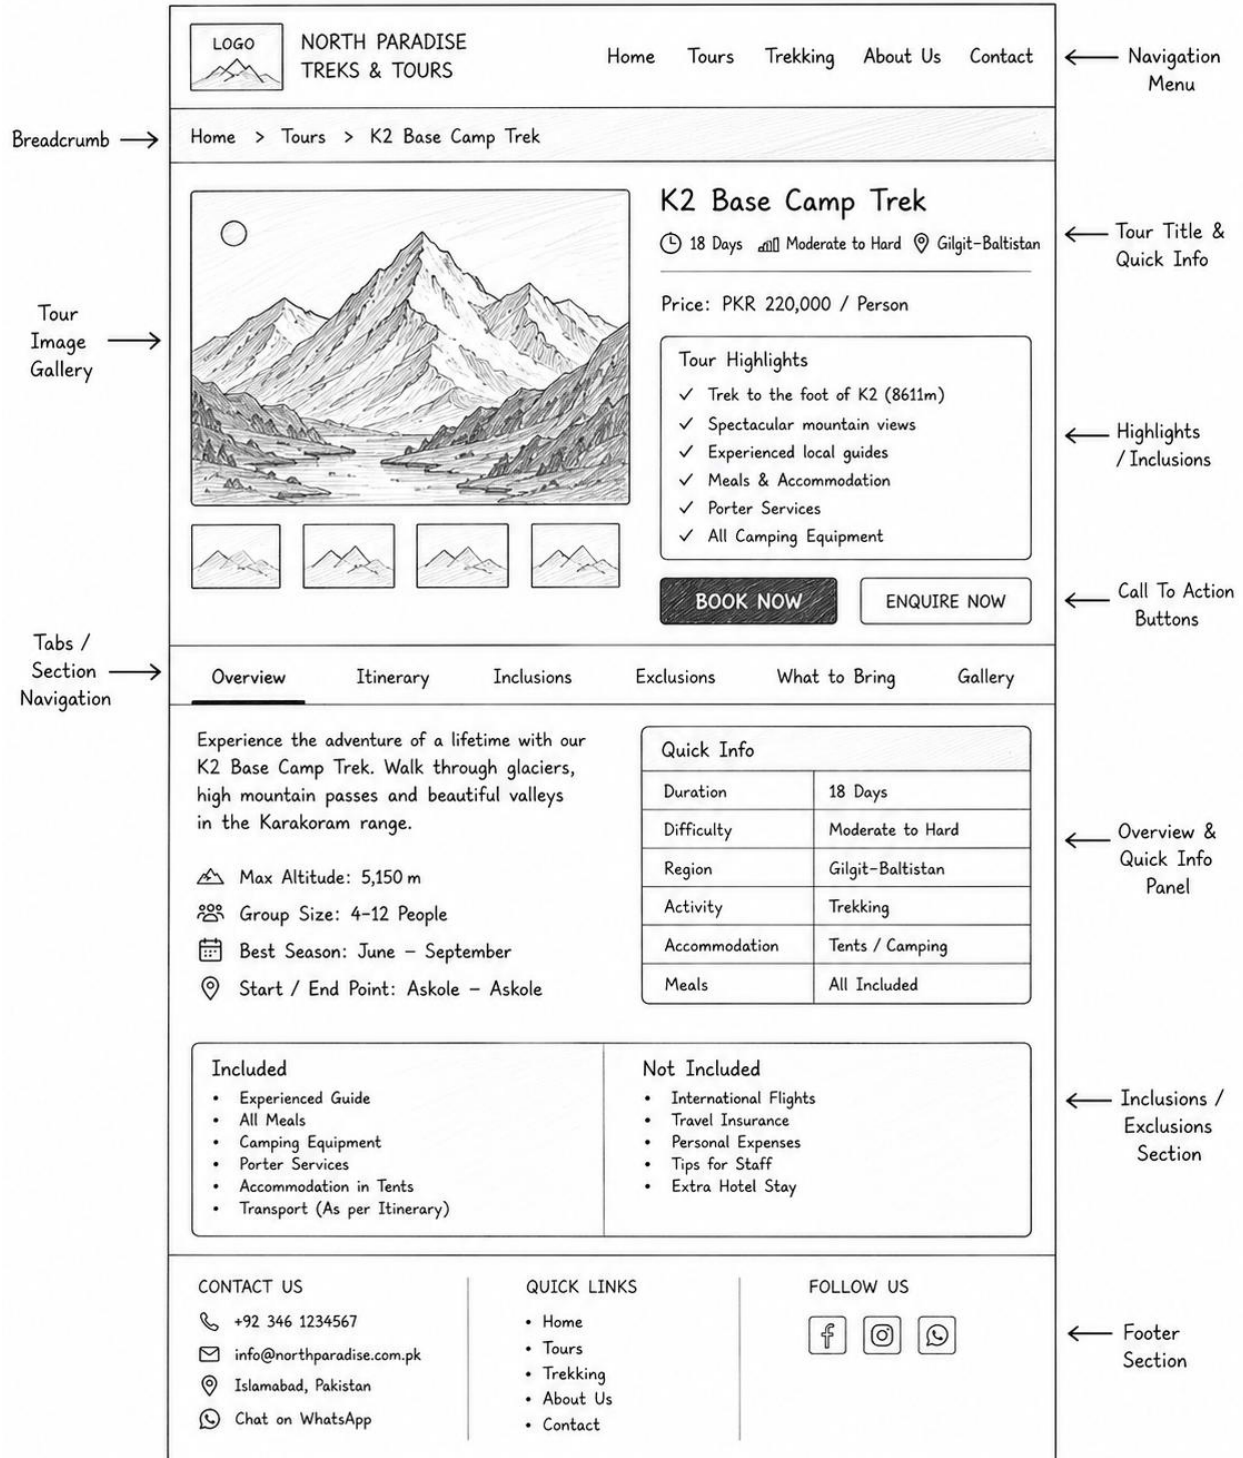

Components

- Search Bar
- Tour Cards
- View Details Buttons

Navigation:

Home → Tours List → Tour Details

Screen 3: Tour Details Page

Components

- Tour Image

- Tour Information
- Itinerary
- Book Now Button

Navigation:

Tours List → Tour Details → Booking Form

Screen 4: Booking Form

Navigation**Lab Task 03:****Scenario 1:** North Paradise Toure

User Type/Persona:

Ali Khan, 25 years old , he is a university student from Islamabad and honestly he just likes adventure travel and trekking more than i expected myself to.

User Goal:

He wants to locate and book a trekking package for the K2 Base Camp Trek, like a proper one, not just random info.

Context of Use:

Ali is at home browsing the website on his laptop during his semester break. He's got some free time, so he compares trekking packages and he tries to lock in a tour for his coming vacation.

Scenario:

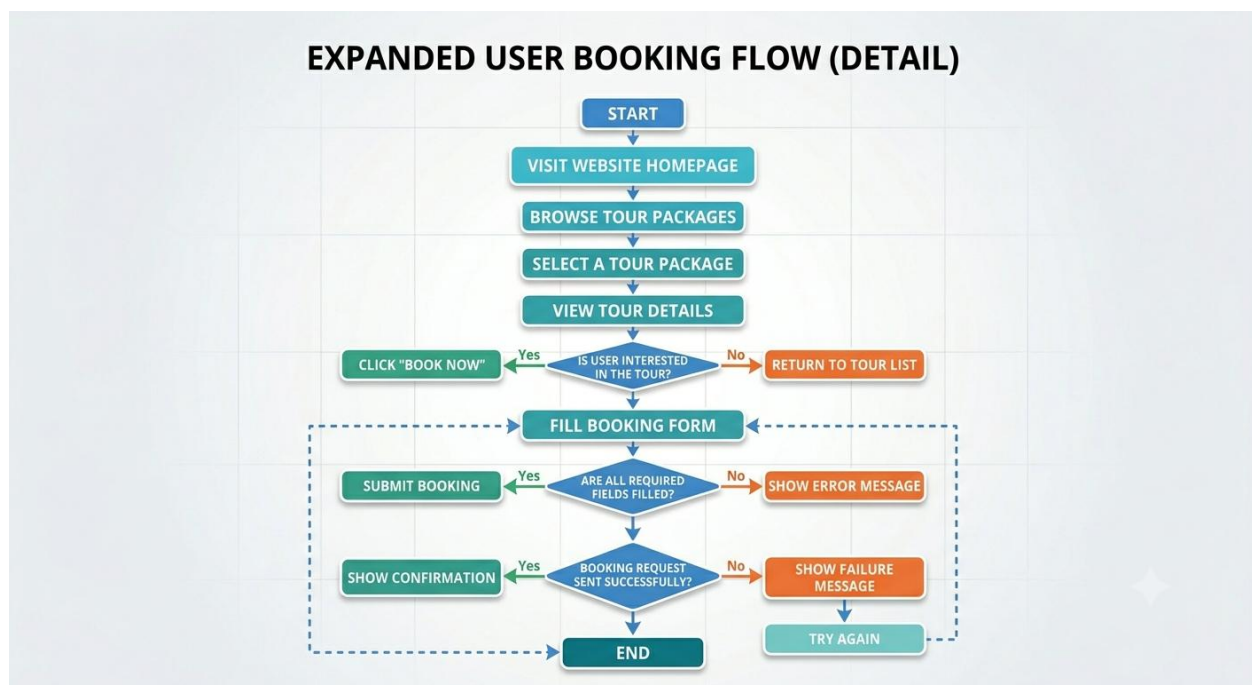

Ali lands on the North Paradise Treks & Tours website and he checks the trekking options they show. He uses the navigation menu to open the Tours page, then he looks at the K2 Base Camp

Trek details. He reads the itinerary, the duration, and the pricing. After that, he feels the package fits what he needs, so he taps the “Book Now” button. Next, he completes the booking form with his personal information, and submits the request, pretty straightforward but also a little rushed, because he’s excited.

Expected Outcome:

The system should successfully save Ali’s booking request and it should show a confirmation message. The message should say the company will contact him shortly about his reservation, yeah that part clearly.

Lab Task 04:

Start Point

Visit Website Homepage

End Point

Booking Confirmation Displayed

Decision Points

1. Is User Interested in the Tour?

- Yes → Continue to booking.

- No → Return to tour listings.

2. Are All Required Fields Filled?

- Yes → Submit booking.
- No → Display validation error.

3. Booking Request Sent Successfully?

- Yes → Show confirmation message.
- No → Show failure message and allow retry.

Alternative Paths

- User decides not to book and returns to browse other tours.
- User submits incomplete information and must correct errors.
- Booking submission fails due to a system/network issue and the user retries.

Lab Task 5: Prototype Evaluation (North Paradise)

1. Participants

Two classmates participated in the usability evaluation of the North Paradise Tour Booking Prototype:

- **User 1:** Yawar Hussain
- **User 2:** Arsalan Saleem

2. Tasks Assigned

Both users were asked to perform the following tasks on the North Paradise low-fidelity prototype:

1. Open the North Paradise homepage
2. Browse available tour packages
3. Select a tour package (e.g., Hunza Valley, Skardu, Swat)
4. View tour details page
5. Fill out the booking form
6. Submit the booking request

3. Observed Difficulties

User 1:

- Found it slightly confusing to locate the tour packages section on the homepage
- Took time to understand how to proceed to booking
- Did not immediately notice the “Book Now” button

User 2:

- Booking form was clear but missing guidance for required fields
- Was unsure if the booking was successfully submitted
- Wanted clearer navigation between pages (Home → Details → Booking)

4. User Comments

User 1:

- “The website is simple but navigation should be more visible.”
- “I like the tour idea, but buttons should stand out more.”

User 2:

- “Tour details page should include more images and pricing clarity.”
- “After booking, I need confirmation that my request is submitted.”

5. Suggestions Received

- Improve navigation bar visibility and structure
- Highlight the “Book Now” button more clearly
- Add booking confirmation message or page
- Improve form labeling and validation hints
- Add more images and descriptions on tour details page
- Provide a clear back button or breadcrumb navigation

6. Conclusion

The usability evaluation of the North Paradise prototype showed that users can complete basic tasks successfully. However, improvements are needed in navigation clarity, button visibility, and booking confirmation to enhance overall user experience.

Lab Task 6: Design Iteration (North Paradise)

1. Original Design Snippet

- Homepage with basic navigation (Home, Tours, Contact)
- Tour packages displayed without strong visual hierarchy
- “Book Now” button placed with normal styling
- Booking form with basic input fields (Name, Email, Date, Package)
- No confirmation message after booking submission

2. Modified Design Snippet

- Improved homepage with highlighted “Explore Tours” section
- Tour packages redesigned as cards with images, price, and rating
- “Book Now” button redesigned with bold color and hover effect
- Booking form updated with required field indicators (*) and placeholders
- Added success confirmation message page after booking submission
- Added breadcrumb navigation (Home > Tours > Details > Booking)

Issue	Improvement	Reason
Users could not easily find tour section on homepage	Added dedicated “Explore Tours” section at top	Improves visibility and faster navigation
“Book Now” button was not noticeable	Changed button style (color, size, hover effect)	Increases user attention and improves click rate
Booking form was unclear	Added placeholders and required field indicators	Helps users understand what to enter
No confirmation after booking	Added success message page	Gives user feedback and improves trust
Navigation between pages was confusing	Added breadcrumb navigation	Helps users track their location in website

4. Justification Summary

The prototype was improved based on user feedback from Task 5. The main focus was to enhance usability, clarity, and user feedback. These changes make the North Paradise system more user-friendly and easier to navigate, improving the overall booking experience.

Lab Task 7: Heuristic Inspection (North Paradise)

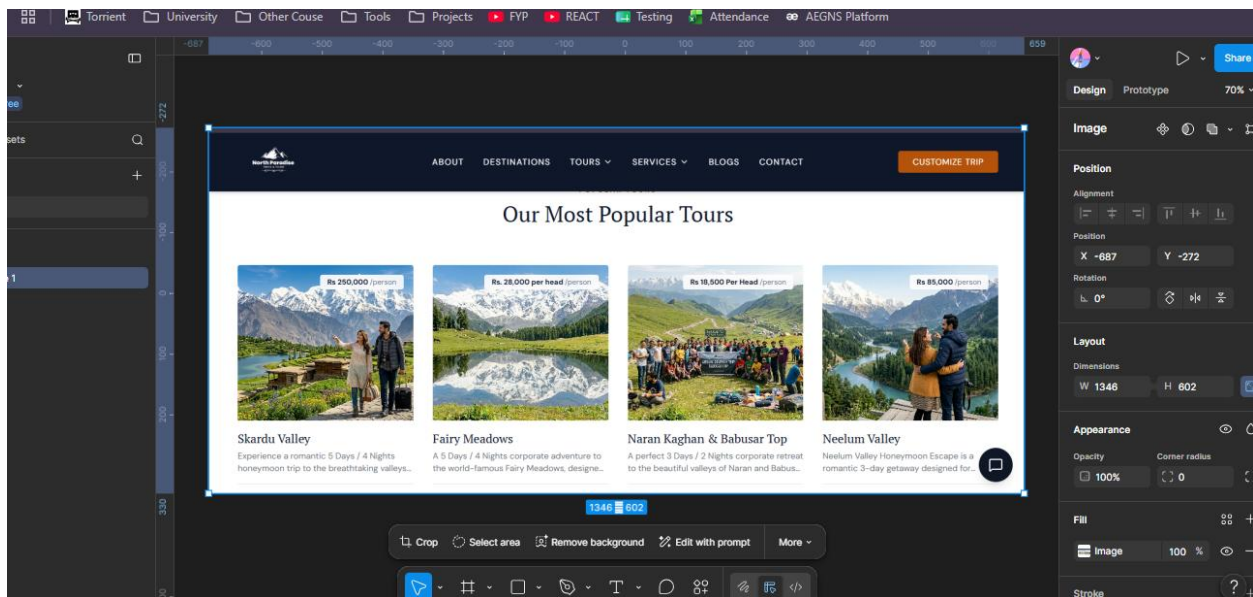

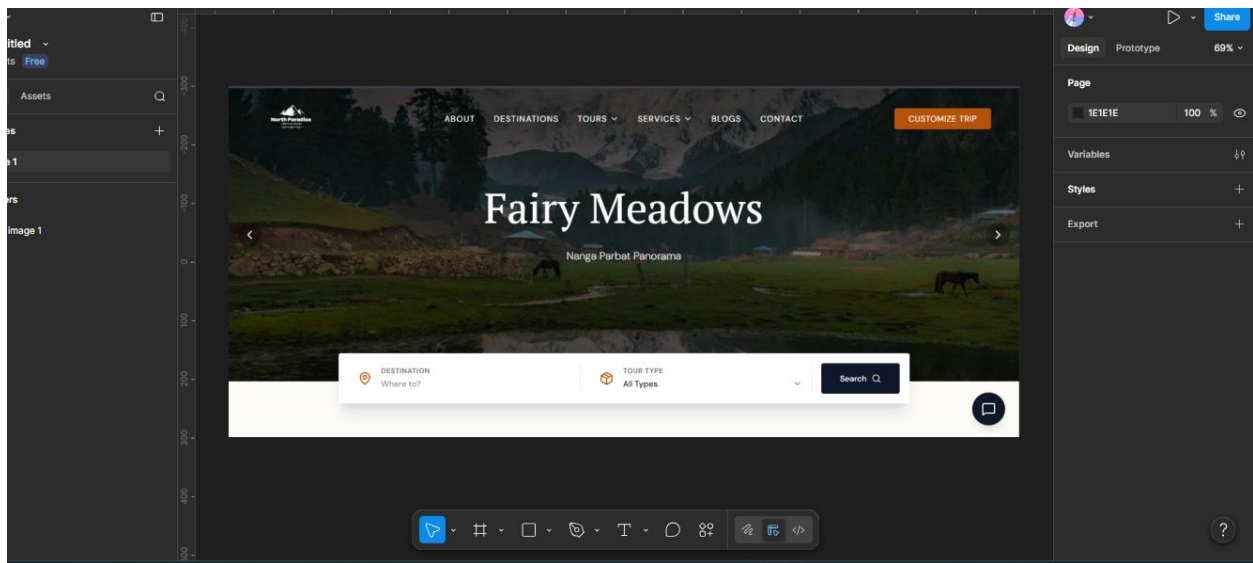

1. Evaluation Summary

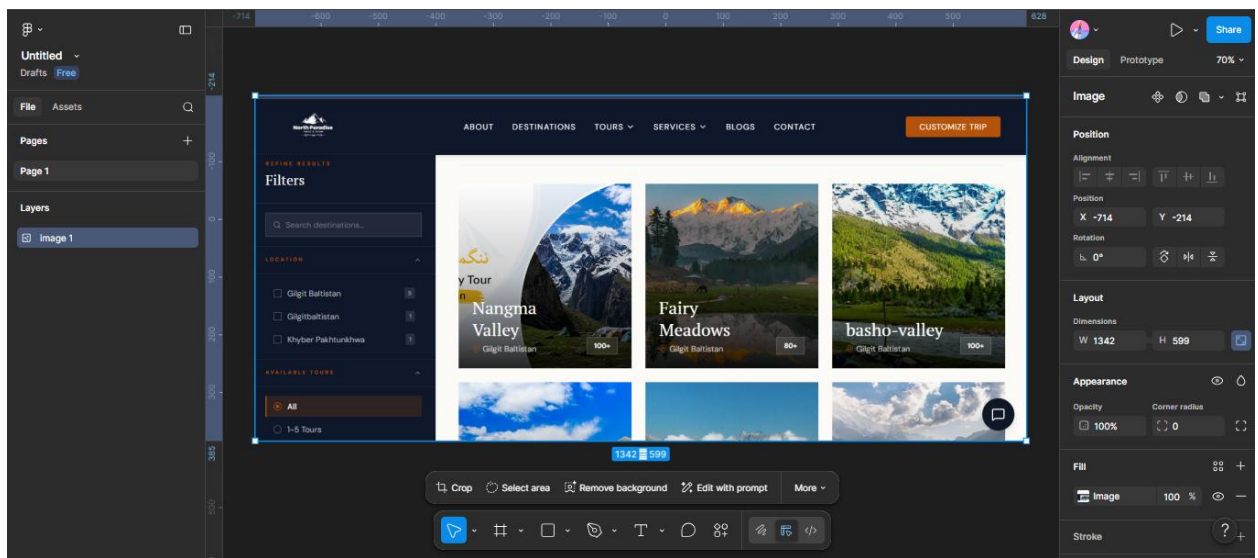

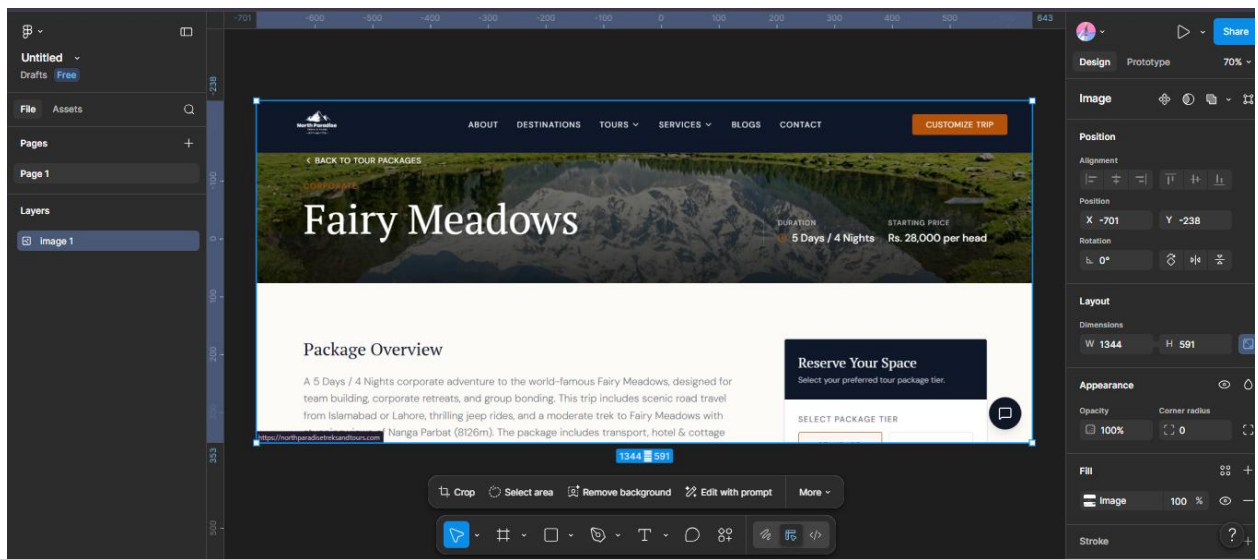

The North Paradise prototype was evaluated using **Nielsen's 10 Usability Heuristics** to identify usability strengths and improvement areas.

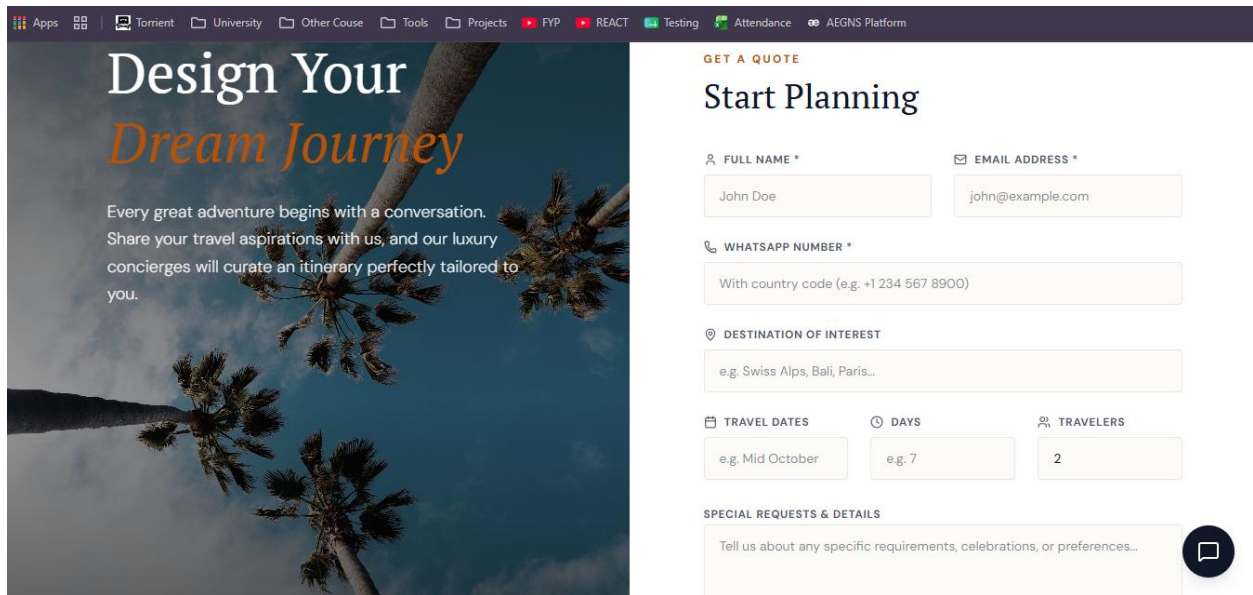

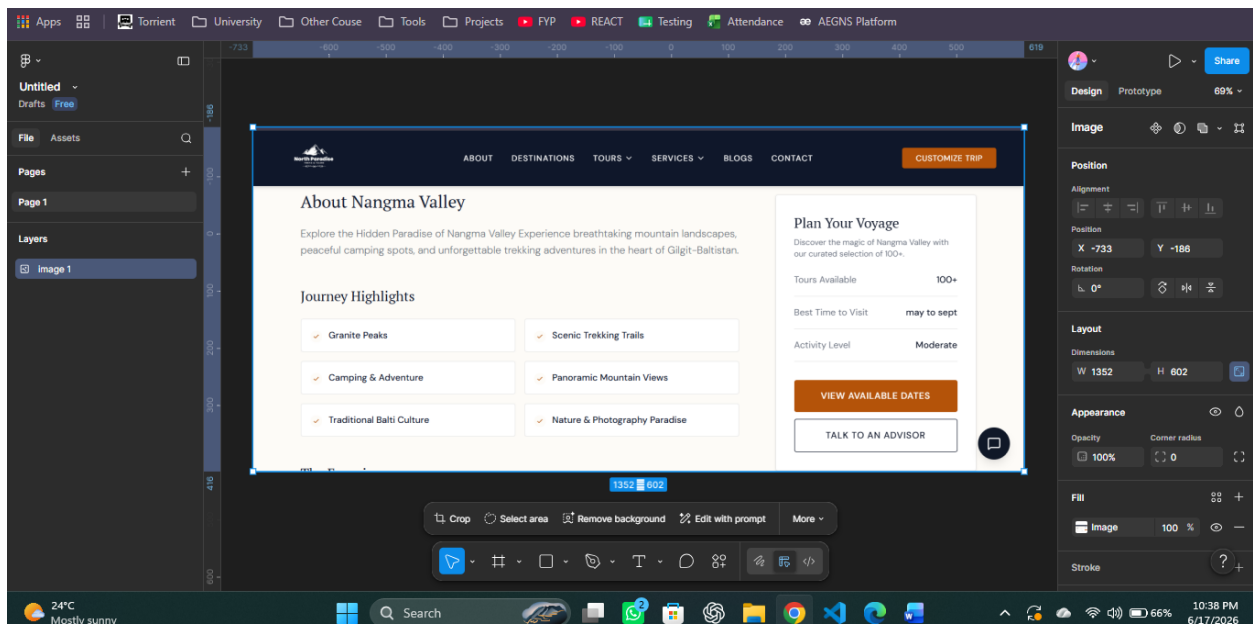

Heuristic	Evidence from Prototype	Improvement Needed
1. Visibility of System Status	Booking form submits but does not clearly show loading or confirmation state	Add loading indicator and clear success/failure messages
2. Match Between System and Real World	Tour names (Hunza, Skardu, Swat) are familiar and meaningful to users	Improve descriptions with real travel details (distance, duration, weather)
3. User Control and Freedom	Users can navigate back from tour details to homepage but no clear breadcrumb in original design	Add breadcrumb navigation and better back button placement
4. Consistency and Standards	Buttons like "Book Now" are used but styling was inconsistent across pages	Standardize button styles (color, size, placement) across all pages
5. Error Prevention	Booking form allows empty submission in prototype stage	Add required field validation and input restrictions
6. Recognition Rather Than Recall	Users must remember where tour details are located from homepage	Add icons, labels, and visible "View Details" buttons on each tour card

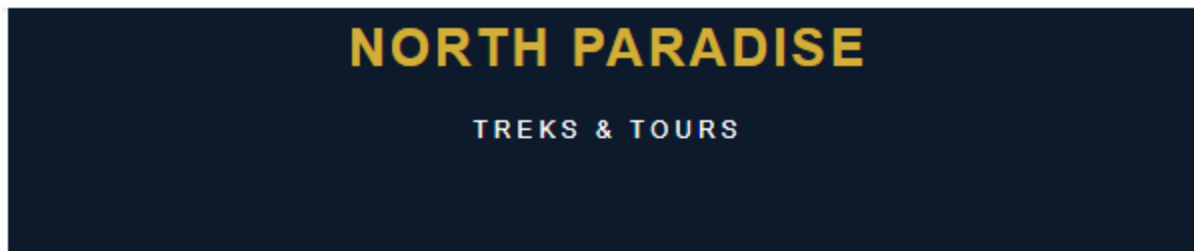

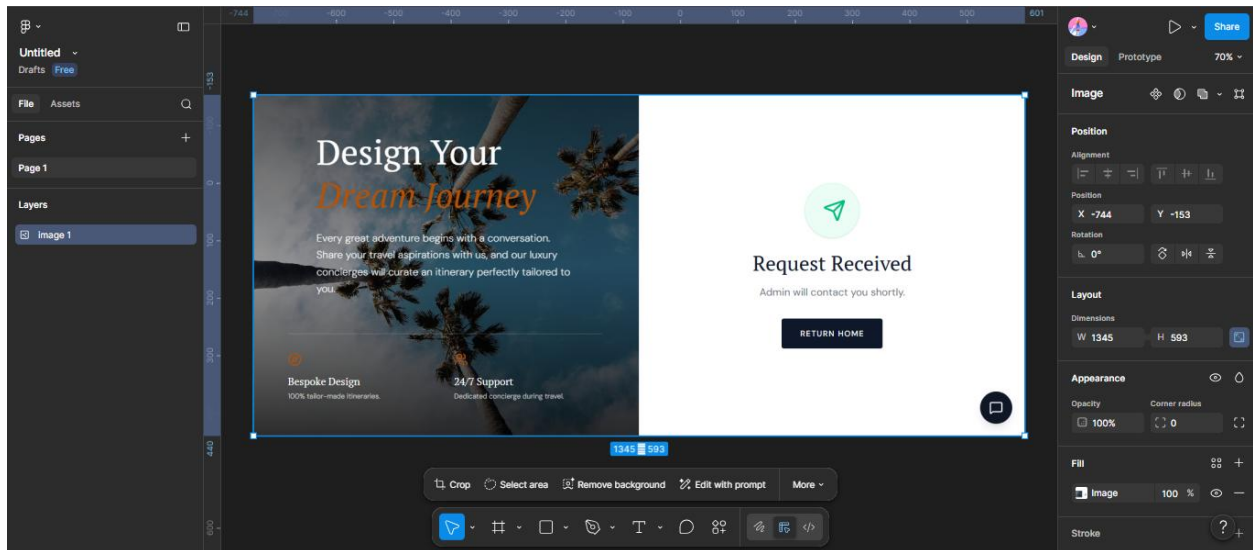

3. Key Findings

- Prototype is simple and understandable, but lacks feedback mechanisms
- Navigation and consistency need improvement
- Form validation is the most critical missing feature
- User guidance can be improved using labels, icons, and structured layout

Hello Yawar Hussain,

Thank you for choosing **North Paradise Treks & Tours**. We have successfully received your inquiry for **Skardu**.

Our dedicated team of travel experts is already reviewing your requirements. We understand that every journey is unique, and we are committed to crafting the perfect experience for you.

What happens next?

Lab Task 9: Reflection Report (North Paradise)

During the prototyping of the North Paradise Tour Booking System, I faced several challenges, especially in creating a clear and user-friendly navigation flow. Designing an intuitive booking process was also difficult because I had to ensure that users could move smoothly from browsing

tours to completing a booking without confusion. Another challenge was deciding how to present information in a simple yet effective layout.

From user feedback, I learned that users need clear visibility of important buttons like “Book Now” and immediate confirmation after submitting a booking. They also suggested improving the tour details page with more visuals and better descriptions. This helped me understand the importance of feedback, clarity, and visual hierarchy in UI design.

The iterative design process significantly improved my solution by allowing me to refine the prototype step by step based on real user input. Each iteration made the system more structured, consistent, and easier to use.

If I had more time, I would improve the UI using a professional tool like Figma, add smoother interactions, and develop a fully functional system with backend integration for real bookings.
